

CLAIMS

What is claimed is:

1                   1. A method of generating a ticket, comprising:  
2                   requesting ticket data using a network;  
3                   sending ticket data corresponding to the ticket using the network,  
4                   where the ticket data includes identification data corresponding to an image of a  
5                   person;  
6                   receiving the ticket data through the network; and  
7                   forming the ticket, including the image, using the ticket data.

1                   2. The method as recited in claim 1, wherein:  
2                   requesting the ticket data includes accessing a server over the network  
3                   with a computer; and  
4                   sending the ticket data includes placing the ticket data onto the  
5                   network with the server.

1                   3. The method as recited in claim 2, wherein:  
2                   forming the ticket includes forming the image on media with an  
3                   imaging device using the identification data.

1                   4. The method as recited in claim 3, wherein:  
2                   receiving the ticket data includes storing the ticket data in the  
3                   computer; and  
4                   forming the ticket includes sending the ticket data to the imaging  
5                   device.

1                   5. The method as recited in claim 4, wherein:  
2                   forming the ticket includes integrating graphics with the image.

1                   6. The method as recited in claim 5, wherein:

the graphics include a watermark corresponding to the identification data.

7. The method as recited in claim 3, wherein:  
receiving the ticket data includes storing the ticket data in the imaging device; and  
forming the ticket includes integrating graphics with the image.

8. The method as recited in claim 7, wherein:  
the graphics include a watermark corresponding to the identification data.

9. The method as recited in claim 1, wherein:  
requesting the ticket data includes accessing a server over the network with an imaging device; and  
sending the ticket data includes placing the ticket data onto the network with the server.

10. The method as recited in claim 9, wherein:  
receiving the ticket data includes storing the ticket data in the imaging device; and  
forming the ticket includes forming the image on media with the imaging device.

11. The method as recited in claim 10, wherein:  
forming the ticket includes integrating graphics with the image.

12. The method as recited in claim 11, wherein:  
the graphics include a watermark corresponding to the identification data.

1           13. A ticket generating apparatus for use with a network, comprising:  
2           a first network enabled device coupled to the network and arranged to  
3 receive ticket data through the network;

4           a second network enabled device coupled to the network and arranged  
5 to send the ticket data to the network, with the ticket data including  
6 identification data corresponding to an image of a person; and

7           an imaging device coupled to the first network enabled device and  
8 arranged to receive the ticket data to form the ticket on media including the  
9 image.

1           14. The ticket generating apparatus as recited in claim 13, wherein:  
2 the first network enabled device includes a computer; and  
3 the second network enabled device includes a server.

1           15. The ticket generating apparatus as recited in claim 14, wherein:  
2 the server includes a configuration to generate the ticket data using  
3 identification data supplied by the computer over the network; and  
4 the server includes a configuration to generate the ticket data including  
5 graphics data integrated with the image.

1           16. The ticket generating apparatus as recited in claim 15, wherein:  
2 the graphics include a watermark corresponding to the identification  
3 data.

1           17. A ticket generating apparatus for use with a network, comprising:  
2 a first network enabled device coupled to the network and arranged to  
3 send ticket data to the network, with the ticket data including identification data  
4 corresponding to an image of a person; and

5 a second network enabled device coupled to the network and arranged  
6 to receive the ticket data through the network and configured to form the ticket  
7 on media including the image.

8 18. The ticket as recited in claim 17, wherein:

9 the first network enabled device includes a server; and

10 the second network enabled device includes an imaging device.

1 19. The ticket generating apparatus as recited in claim 18, wherein:

2 the server includes a configuration to generate the ticket data using

3 identification data supplied by the imaging device over the network; and

4 the server includes a configuration to generate the ticket data including

5 graphics data integrated with the image.

1 20. The ticket generating apparatus as recited in claim 19, wherein:

2 the graphics include a watermark corresponding to the identification

3 data.
